B.Tech, Computer Science • NIIT University • Graduating Aug 2026

ABOUT

Final-year CS student who builds things, not just specs them. I've shipped production AI systems, lived inside product dashboards to surface what wasn't being tracked, and turned messy stakeholder asks into workflows that moved measurable metrics. I use AI tools daily — not for content, but to prototype and build fast. Strong on product thinking, detail-oriented on execution.

EXPERIENCE

AI Automation & Product Intern • GroMo

Jul 2025 – Present

Fintech platform enabling 1M+ partners to distribute financial products.

- Shipped 3 production AI systems end-to-end in under 8 weeks each, using n8n, OpenAI APIs, and AI coding tools to compress prototype cycles from weeks to hours.
- **Built the GP Query Auto-Responder** — GPT-4o classifies inbound partner emails, fetches live data via internal APIs, and dispatches contextual replies. Cut response turnaround from hours to seconds.
- Designed a 24/7 L1 document audit pipeline (OpenAI Vision + Zoho integration) for partner claim verification. Repeatedly asked “why does this fail?” against real rejects to tune the prompt and decision rules.
- Spec'd and prototyped AI voice agents for outbound campaigns; A/B-tested scripts, listened back on real calls, and tuned for tone and clarity — drove a 10% lift in engagement.
- **Built OTIS, an AI calls auditor** — designed and shipped an AI quality-assurance tool that transcribes and grades AI agent calls against a 10-dimension fintech rubric (sales, compliance, language adaptation across Hindi/English/Hinglish), replacing manual call review for the AI Ops team.
- Lived inside the product dashboard to surface what wasn't being tracked — flagged blind spots in audit failure modes and proposed new metrics that shaped how ops measured pipeline health.
- Partnered with growth, tech, and ops to translate messy stakeholder asks into wireframes, specs, and shippable workflows tied to business KPIs — cutting manual effort by 20%.

Learning & Teaching Assistant • COEET, NIIT University

Nov 2022 – Jul 2023 | Aug – Nov 2024

- Coached 30+ peers in analytical thinking, structured problem-solving, and clear communication.
- Led research teams to scope, milestone, and ship technical projects — lifted completion rates by 15% through tighter planning ownership.

SELECTED PROJECTS

Cloud-Based Threat Intelligence Dashboard

Capstone 2025

- Designed and shipped a real-time dashboard (React.js, Node.js, GCP) integrating VirusTotal, Shodan, and OTX feeds. Owned the full lifecycle — user interviews with security analysts, wireframes, API integration, deployment.
- Refactored the UI three times based on how analysts actually scanned for threats — the dashboard surfaces signal first, noise second.

SDN Load Balancing under DDoS

DAISY Research 2024

- Used Mininet and AI-driven detection models to test load-balancing strategies under attack; ran hypothesis-driven experiments and validated results with data.

LEADERSHIP

Marketing Coordinator • Ingenuity '25 (NIIT University Annual Fest)

2025

- Led marketing, sponsorships, and on-ground execution for the university's flagship event — coordinated creative, ops, and partnerships across multiple teams.

SKILLS

AI & Building	OpenAI API, Claude API, GPT-4o, LangChain; AI coding tools (Cursor, Claude Code, Lovable); voice agents (Bolna, Retell); n8n, Zapier, Zoho Flow
Product & Design	Wireframing, UX writing, dashboard design, user research, A/B testing, requirements specs, REST APIs, webhooks
Engineering	Python, JavaScript, React.js, Node.js, MongoDB Atlas, MySQL, Git, GCP
Tools	HubSpot CRM, Zoho Desk, Postman, MS Office, Google Workspace, Splunk, Nmap
